

Nanyang Primary School  
Primary 5  
Mathematics  
Term 2 Weighted Assessment

Marks:

/20

Name: \_\_\_\_\_ ( )

Class: Primary 5 ( )

Date: \_\_\_\_\_

Parent's Signature: \_\_\_\_\_

Duration: 40 minutes

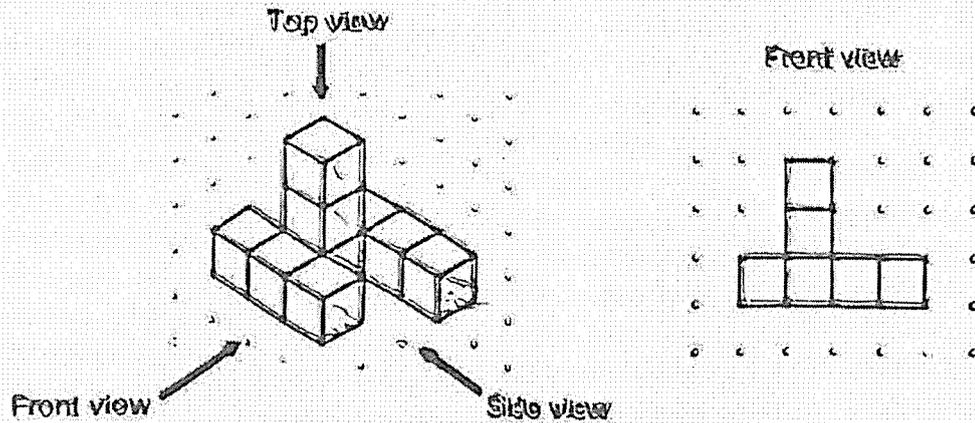

The use of an approved calculator is allowed.

Please sign and return the paper the next day. Any queries should be raised at the same time when returning paper.

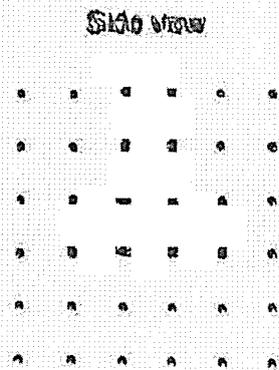

Questions 1 to 2 carry 2 marks each. Show your working clearly and write your answers in the spaces provided. For questions which require units, give your answers in the units stated. (4 marks)

- 1 (a) Ali builds a solid using 9 unit cubes.

Draw the side view of the solid on the grid below.

- (b) Find the greatest number of unit cubes Ali can add to the solid without changing the front view and side view.

Ans: \_\_\_\_\_

2 Jack had some marbles at first. He sold  $\frac{1}{5}$  of the marbles. He then gave  $\frac{5}{8}$  of the remaining marbles to his sister. He had 360 marbles left in the end. How many marbles did he have at first?

Ans: \_\_\_\_\_

For questions 3 to 6, show your working clearly and write your answers in the spaces provided. The number of marks available is shown in brackets [ ] at the end of each question or part-question. (16 marks)

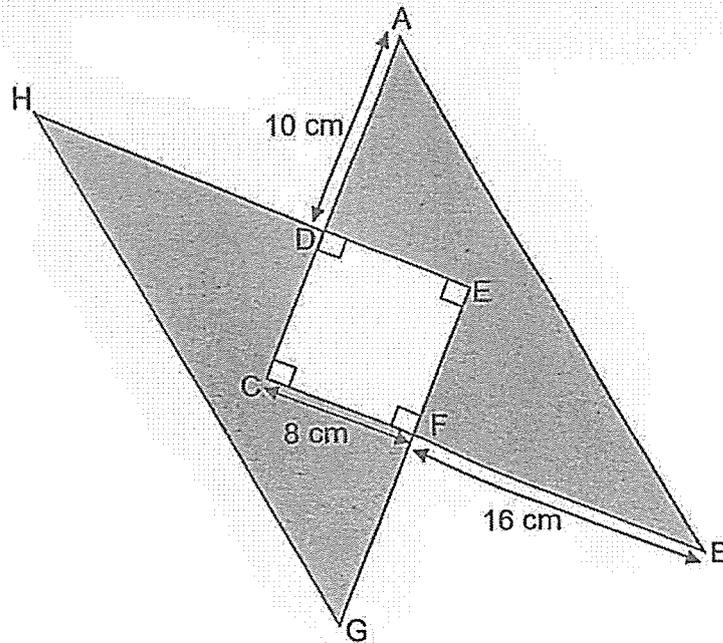

---

- 3 Anna had  $\frac{7}{8}$  kg of flour at first. She used  $\frac{3}{7}$  of the flour to bake a cake. Bob used  $\frac{1}{4}$  kg of flour more than Anna. How much flour did Bob use? Give your answer in kg.

Ans: \_\_\_\_\_ kg [3]

---

- 4 The figure below is formed by 2 identical triangles, ABC and GHE. Two such triangles are glued together such that they overlap as shown below. CDEF is a square of side 8 cm.

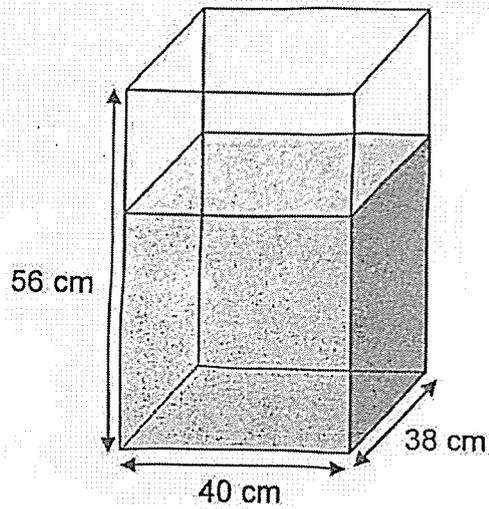

- (a) Find the area of triangle ABC.

Ans: (a)  cm<sup>2</sup> [2]

- (b) Find the total area of the shaded parts of the figure.

Ans: (b)  cm<sup>2</sup> [2]

- 5 The figure below shows a rectangular tank. It was  $\frac{5}{7}$  - filled with water at first.

- (a) How much water was in the tank at first?

Ans: (a) \_\_\_\_\_  $\text{cm}^3$  [2]

- (b) Syakir poured the water from the tank to completely fill as many empty bottles as possible. The capacity of each bottle was  $225 \text{ cm}^3$ . How much water was left in the tank in the end?

Ans: (b) \_\_\_\_\_  $\text{cm}^3$  [2]

6. At an amusement park,  $\frac{1}{3}$  of the visitors were children.  $\frac{1}{6}$  of the children were boys and  $\frac{1}{4}$  of the adults were men. There were 196 men and boys altogether.

(a) How many visitors were there at the amusement park?

Ans: (a) \_\_\_\_\_ [3]

- (b) After some children went home, there were three times as many adults as children left at the amusement park. How many children went home?

Ans: (b) \_\_\_\_\_ [2]

# 2025 PS WA2 Worked Solutions

Questions 1 to 2 carry 2 marks each. Show your working clearly and write your answers in the spaces provided. For questions which require units, give your answers in the units stated. (4 marks)

- 1 (a) Ali builds a solid using 9 unit cubes.

Draw the side view of the solid on the grid below.

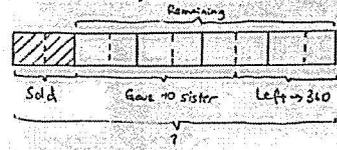

- (b) Find the greatest number of unit cubes Ali can add to the solid without changing the front view and side view.

(See diagram for the 5 added cubes)

Ans: 5

2

- 2 Jack had some marbles at first. He sold  $\frac{1}{5}$  of the marbles. He then gave  $\frac{5}{8}$  of the remaining marbles to his sister. He had 360 marbles left in the end. How many marbles did he have at first?

$$3 \text{ units} = 360$$

$$1 \text{ unit} = 360 \div 3 = 120$$

$$10 \text{ units} = 120 \times 10 = 1200 \text{ (Ans)}$$

Alternative method

$$1 - \frac{1}{5} = \frac{4}{5} \rightarrow \text{Fraction of marbles at first remaining}$$

$$\frac{10}{10} \text{ of marbles at first} \rightarrow 120 \times 10 = 1200 \text{ (Ans)}$$

$$1 - \frac{5}{8} = \frac{3}{8} \rightarrow \text{Fraction of remaining marbles left}$$

$$\frac{3}{8} \times \frac{4}{5} = \frac{3}{10} \rightarrow \text{Fraction of marbles at first left}$$

$$\frac{3}{10} \text{ of marbles at first} \rightarrow 360$$

$$\frac{1}{10} \text{ of marbles at first} \rightarrow 360 \div 3 = 1200$$

Ans: 1200

3

For questions 3 to 6, show your working clearly and write your answers in the spaces provided. The number of marks available is shown in brackets [ ] at the end of each question or part-question. (16 marks)

- 3 Anna had  $\frac{7}{8}$  kg of flour at first. She used  $\frac{3}{7}$  of the flour to bake a cake.

Bob used  $\frac{1}{4}$  kg of flour more than Anna. How much flour did Bob use?

Give your answer in kg.

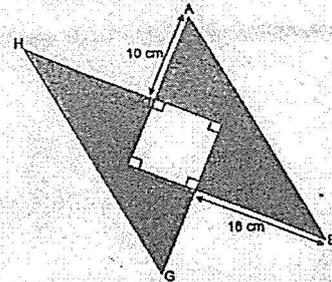

$$\text{Amount of flour Anna used} \rightarrow \frac{3}{7} \times \frac{7}{8} \text{ kg} = \frac{3}{8} \text{ kg}$$

$$\text{Amount of flour Bob used} \rightarrow \frac{3}{8} \text{ kg} + \frac{1}{4} \text{ kg} = \frac{5}{8} \text{ kg (Ans)}$$

Ans:  $\frac{5}{8}$  kg [3]

4

- 4 The figure below is formed by 2 identical triangles, ABC and GHE. Two such triangles are glued together such that they overlap as shown below. CDEF is a square of side 8 cm.

- (a) Find the area of triangle ABC.

$$AC \rightarrow 10 \times 8 = 80$$

$$BC \rightarrow 16 \times 8 = 128$$

$$\text{Area of } \triangle ABC \rightarrow \frac{1}{2} \times 10 \times 8 + \frac{1}{2} \times 16 \times 8 = 216 \text{ (Ans)}$$

Ans: (a) 216 cm<sup>2</sup> [2]

- (b) Find the total area of the shaded parts of the figure.

$$\text{Area of } CDEF \rightarrow 8 \times 8 = 64$$

$$\text{Area of } ADEFB \rightarrow 216 - 64 = 152$$

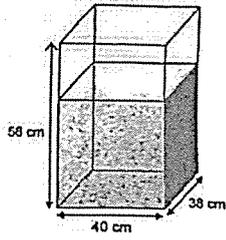

$$\text{Area of } GFCDH = \text{Area of } ADEFB$$

$$\text{Thus, area of shaded parts} \rightarrow 152 \times 2 = 304 \text{ (Ans)}$$

Ans: (b) 304 cm<sup>2</sup> [2]

5

- 5 The figure below shows a rectangular tank. It was  $\frac{5}{7}$  filled with water at first.

- (a) How much water was in the tank at first?

$$\frac{5}{7} \times 58 \times 40 \times 38 = 60800 \text{ (ans)}$$

Ans: (a) 60800 cm<sup>3</sup> [2]

- (b) Syahr poured the water from the tank to completely fill as many empty bottles as possible. The capacity of each bottle was 225 cm<sup>3</sup>. How much water was left in the tank in the end?

$$60800 \div 225 \approx 270$$

270 bottles were filled completely

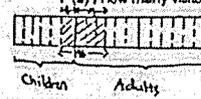

$$270 \times 225 = 60750$$

$$60800 - 60750 = 50 \text{ (ans)}$$

Ans: (b) 50 cm<sup>3</sup> [2]

- 6 At an amusement park,  $\frac{1}{3}$  of the visitors were children.  $\frac{1}{6}$  of the children were boys and  $\frac{1}{4}$  of the adults were men. There were 196 men and boys altogether.

$\frac{1}{6}$  of children  $\rightarrow \frac{1}{4} = \frac{1}{12}$  of adults

$$4 \text{ units} = 196$$

$$1 \text{ unit} = 196 \div 4 = 49$$

$$\frac{1}{3} \times 12 = 4 \text{ Fraction of visitors that were children}$$

$$1 - \frac{1}{3} = \frac{2}{3} \text{ Fraction of visitors that were adults}$$

$$\frac{1}{6} \times 4 = \frac{2}{3} \text{ Fraction of children that were boys}$$

$$\frac{1}{4} \times 8 = 2 \text{ Fraction of adults that were men}$$

$$\frac{1}{12} \times 12 = 1 \text{ Fraction of visitors that were boys}$$

$$\frac{1}{6} \times 12 = 2 \text{ Fraction of visitors that were men}$$

$$\frac{1}{12} \times 12 = 1 \text{ Fraction of visitors that were boys}$$

Ans: (a) 882 [3]

- (b) After some children went home, there were three times as many adults as children left at the amusement park. How many children went home?

$$\text{Number of adults} \rightarrow \frac{2}{3} \times 882 = 588$$

$$274 - 196 = 98 \text{ (ans)}$$

$$\text{Number of children at the end} \rightarrow 588 \div 3 = 196$$

$$\text{Number of children at first} \rightarrow \frac{1}{2} \times 882 = 441$$

Ans: (b) 98 [2]
